g

Having PPE available

Establishing norms around the 5 commitments

Mental health and supporting staff and students

Parents nervous to vaccinate

Push back from families who don't vaccinate, those who don't think it's a real concern,

Student and staff safety

Families who have immuno compromised family at home

Parents understanding risks and keeping kids home

Mixing kids cohorts/sharing spaces/sharing resources with both students and staff

There is community spread 37 cases in the last 7 days

Families traveling right up until school starts and bringing back

What can we require? Wearing masks, what about those who don't/won't wear them? Who enforces them?

Immuno compromised students, how will they be accommodated

Gatherings - drop off and pick up times and minimizing this

communication to parents and parents understanding the need to keep their kids home when they are sick

Dynamic when someone is diagnosed, what our actions would be at that point

Transmission for HS students due to parties/not social distancing

Aerotransmission research, can stay in air for a long time, ventilation systems and their effectiveness

Staff safety

Wearing masks

Staff interacting with staff at school

social determinants of health and how they are addressed

Keeping sanitization a priority and build time in for this

Kids not being in school

Concern for staff for those at risk

Vaccinations - making sure we address ones we do have

Transmission rates are lower with kids, so adult to adults and older kids transmission is a concern

Transportation and cohorts or kids mixing

HS students - not as careful with masks and social distancing and we can keep an eye on them in school

Keeping parents away from the schools

Medical recommendation regarding reopening?

Teaching handwashing skills to young children.

parents what they do they want to be back in (online) and do parents?

Maybe have two models online or in person

reinforcing everyone to do the 5 commitments

to find of going kids have together

Make it clear who enforces things (mask wearing, etc)

Extra staff for cleaning, expectations for what teachers clean, sharing items, removing things that are not essential and keeping it simple

using outside spaces

Having enough staff to fill in if people get sick/drivers, classroom teachers, support, facilities, etc

cohorts, physical distancing, deep cleaning in between cohorts

We need to use health recommendations for re-opening, not our gut.

altering schedules so we can do more social distancing

limiting adults on campus

maybe 3 ft distancing (American academy of pediatrics recommended) with masks

Eating lunch at desks

No sharing equipment/supplies at all

Educate the public on CDC recommendations, vaccines, 5 commitments, state guidelines, wearing masks

Can specialists go into classrooms remotely?

Can you use different spaces and how we use them to minimize risk

Keeping cohorts together at all times

Specialists to go the classrooms instead of kids moving

Consider reading specialists etc and other cohorts mixing and remixing

Review Tri county, CDC recommendations to guide us

Hazard pay for teachers on campus

Keeping 5 commitments

Keeping kids in cohorts

increase ventilation, clean filters, if we open doors, we need more staff to maintain safety

Could families sign the 5 commitments agreement

temperature and health screenings, before getting on bus or at school - at home?

plexiglass shields

Consider how to give kids a break/recess

Let staff who are at risk teach online

Covid testing for staff (and students) with symptoms available?

review what other districts have done, who do we turn to?

Same pods stay together Mon/Tues, cleaning on Wed then other group Thurs/Fri

mask worn at all times at school/on bus
